**DUAL-LITE INTRODUCES NEW
SEMPRA® SCWL CAST ALUMINUM WET LOCATION LED EXIT SIGN**

With the introduction of the SCWL series, Dual-Lite, a Hubbell Lighting, Inc. brand, expands its Sempra® cast aluminum exit sign line to include wet location listed products

The SCWL series features rugged, corrosion resistant 0.420" thick aluminum construction and a 0.125" thick polycarbonate face shield secured with vandal-resistant stainless hardware.

Offered in AC-Only or battery back-up emergency use models, the SCWL series is available with red or green letters and single-face or double-face configurations. Break-out chevron arrows provide job-site path of egress directional programming. The LED light engine provides consistently bright, even EXIT legend illumination.

A lifetime warranty on the LED illumination strip, a five-year warranty on the electronics and a 10-year battery warranty on emergency use models attest to the SCWL's designed-in reliability.

Ideal for high abuse/high traffic areas including correctional facilities, high schools, universities and other institutional applications, all SCWL models incorporate long-life LED's and a canopy for surface/ceiling/end-mounting versatility. The wet location listing allows installation in food processing/preparation/warehousing locations, parking garages, hotel/motel exterior walkways, uncovered public access building walkways and open-air arenas. An optional heater for battery-equipped models extends the applicable temperature operating range.

All models are CSA certified to UL standard 924 (Emergency Lighting and Power Equipment), and fully comply with the requirements of the Life Safety Code (NFPA 101) and the National Electrical Code (NFPA 70).
